# Mission Statement

Coldbank generates revenue for its holders through the addition of liquidity and the DAO. Profits are then returned in the form of the DAO dashboard and more liquidity added; creating a deflationary token that will grow organically.

## What is \$COLD?

\$COLD is a decentralized deflationary token on the Ethereum chain that uses its trusted deflationary contract and techniques to further profit gains for holders. Shareholders of Coldbank will be able to vote on which yield farming assets to purchase through the DAO dashboard. Profits from the DAO dashboard will be returned in the form of more liquidity added, growing the \$COLD liquidity pool.

## Why should you invest?

Much like a hedge fund or ETF, each \$COLD token represents a share in the profits of Coldbank. Coldbank allows for holders to benefit from the long-term holding from the growth of the liquidity pool. \$COLD will allocate a certain percent in the marketing wallet to invest in assets that will be used for yield farming. The profits from such assets will be redistributed to stakeholders in the form of liquidity added. Our team of experienced crypto financiers constructs a risk-balanced fund of multiple tokens and coins to identify projects before they reach their full potential.

# How does it work?

Through our trusted deflationary contract and investing techniques, each buy and sell contributes to the liquidity pool. This makes the token less volatile, thus, keeping the stakeholder's profits safe from inorganic pumps and large dumps. Buyers contribute 6% to the liquidity pool, 5% to the marketing wallet, and 3% for the developer fee. Sellers contribute 8% to the liquidity, 5% to the marketing wallet and 3% for the developer fee. These tokenomics ensure the longevity of the token as there is no need for sudden buybacks or artificial pumps. Artificially pumping the token leads to large amounts of sells for holders of \$COLD to secure profits. However, through our liquidity contract, we have ensured that there is no need for holders to panic sell. As the liquidity grows the holder's investment grows and the impact of others selling is negligible.

## \$COLD tokenomics

The maximum supply of Coldbank is 1 Trillion Tokens, or 1,000,000,000,000. Buyers contribute 6% to the liquidity pool, 5% to the marketing wallet, and 3% for the developer fee. Sellers contribute 8% to the liquidity, 5% to the marketing wallet and 3% for the developer fee. The Marketing wallet will be used for purchasing yield-bearing assets which will also be redistributed to holders through the dashboard (in development). A summary of this can be viewed on the next page.

ON BUY: 14% | ON SELL AFTER 24 HOURS: 16% | ON SELL WITHIN 24 HOURS: 25%

# Ecosystem expansion

## Coldbank Academy

Investing is hard. As such, our team at Coldbank will release multiple forms of media to educate our holders, on each of our investments. These will take the form of official Tiktok and YouTube videos, as well as Medium articles. We will go in depth on the reasoning behind why such projects deserve a spot in our portfolio and include all relevant information in an easy-to-consume form. This allows all \$COLD holders to make informed decisions on the future of our portfolio.

## Monthly and Quarterly Reports

Tracking the previous performance of our investments is vital to attracting new holders. Transparent summaries on the performance of our assets will be released monthly as well as quarterly. These reports aim to demonstrate to the wider community that we have a proven track record of earning consistent profits.

## ROADMAP

1

~~Fair launch on Uniswap~~  
~~Extensive Marketing Begins~~  
~~200 Holders~~  
~~600 Telegram Members~~  
Partnership with Influencers  
Whitepaper Release  
DAO Release  
10 Million Market cap  
Viral Campaign

2

~~Strategic Partnerships~~  
~~CoinGecko Listing~~  
~~600 Holders~~  
~~1000 Telegram Members~~
